

Jim Hilyard

There are no jobs on a dead planet. We need to reduce then eliminate consumption of fossil fuels in New Mexico and the best way to do this is use CURRENT oil and gas revenue for rebates/incentives for clean energy transportation and power generation. New Mexico has abundant wind and sun, we should be using them to provide cheap, plentiful energy to our state and neighboring states. The price of EV's is coming down and with govt incentives we can drive it down much further to where internal combustion is the costlier option. NM will also need to ensure FAST charging stations are reliable and easy to find. New Mexico really has the chance to LEAD at this due to our climate. LETS DO IT.
