

Cristy Holde

For 7 years I have been learning about E-Vehicles. I have an e-bike I can ride for exercise; but so far, owning a used e-vehicle is out of reach for me. I am retired, live mostly on my Social Security benefits and some savings from my career days. I constantly look for a used, 4-5 year old hybrid; however I am really waiting for full e-v to drive --- hopefully in the next year or two. Federal and State rebates will make this possible for me. Why is this important? I watch the climate crisis indicators from the ICPPA. As a planet of species, we humans are responsible for this disaster. The smell of petrol burning is common on every street in our country and beyond. My father was in the oil business, building hundreds of gas stations from the Mississippi River to California in the post WWII years. I benefitted from his business through my education. Now I know it is past time of peak oil, and our addiction to oil is our fatal poison. Please, support Electric Vehicles as the one decision individuals can make quickly to save our planet.
