

## Ruby Cowgill

EIB know that Environmental/climate change is a cash cow their greed is powering the EIB RULE 23-56(R) THE EIB KNOWS:EV batteries contain lithium, manganese, cobalt, graphite, steel and nickel. When disposed EV BATTERIES will deposit toxic chemicals that seep into soil and water contaminating natural resources and will enter the food supply chain causing death and damage to humans AND ALL ANIMALES. I don't buy the recycle bit people do not even recycle their plastic trash. We have proof that some of the companies and agencies qualify to remove toxic waste can dispose of it in unsafe way just to save money even at the expense of people's health or Lives. Those of you that work for/or profit from the EIB rules maybe killing yourselves or the people you love. exposure to toxic chemicals can be a slow miserable death. Electricity comes from powerplants and EIB in part is responsible for regulating PNM power plant out of business one of the cleanest plants in New Mexico paying million to retrofit to comply with new regulation then the EIB would make more rules. However, a power plant APS maybe 5 miles away still in New Mexico emissions are unchecked. EV are not good for New Mexico we are a working state that uses heavy duty trucks and equipment. In New Mexico vehicle purchases in 2022 were 96.08% powered by GAS/diesel/hybrid. WE need the power and in many of our rural area do not even have Electricity in their home. Do the right thing and dissolve the Advanced Clean Car 11 Many of you may have never experience living without electricity and I hope we never have too. EIB I hope you will put well being over greed. There are many ways you can really help EIB 25-56(R) is not one of them.
