

## Sheila Gibbens

As a retiree with limited income I recently upgraded my home electrical service to accommodate an electric vehicle. I did this because I have watched New Mexico get much hotter over the last 50 years. I've watched as our lands have dried out, burned and deteriorated.

I have followed climate change for over 40 years. All those predictions from back then have come true.

As a scientist I know science is fact! And the science on climate change is terrifying. We have NO TIME LEFT! I

I want my grandchild to be able to survive to produce another generation. But the earth's future looks very bleak unless we take action NOW.

I don't like financial hardship but by spending my money on my electrical service I was willing to put my money where my mouth is for The Future.

Please support this effort to transition to electric vehicles. Let New Mexico lead the nation and give future generations a chance. Thank you.

I am writing to express my strong support for Clean Cars and Trucks and Heavy Duty Omnibus standards to apply to the 2027 model year. Nine other states have already embraced these standards. Cleaner cars and trucks are a critical tool in solving the urgent climate crisis, but they will also save New Mexicans billions of dollars by 2050 and prevent thousands of deaths and respiratory attacks. New Mexico-specific analyses have found that Clean Cars and Trucks would slash climate pollution by up to 139 million metric tons by 2050, the equivalent of the entire state's emissions in one year, making these standards among the most effective climate policies ever adopted in New Mexico. They will also help New Mexico access millions in Inflation Reduction Act funding to boost EV infrastructure and make clean cars more accessible, affordable and convenient. In addition, a new study shows full adoption of Clean Cars alone would increase New Mexico economic activity by up to \$44 billion and add nearly 1,000 jobs. The New Mexico studies also show that Clean Cars and Trucks standards will literally save lives in New Mexico, preventing 158 premature deaths and more than 76,000 cases of respiratory illnesses by 2050. These standards will save drivers money, increase availability of zero-emission vehicles for consumers, and promote broader access to these money-saving vehicles for all New Mexicans. The state should seize the opportunity to adopt these standards together in 2023 to get cleaner trucks and cars on our roads sooner and bring New Mexico back in line with life-saving pollution standards. Thank you for your consideration.
