

## Gabriel Austin

I do not like this at all, its not as green as people think it is. It costs way more all around not just to purchase but for the dealerships to have them. its cost a lot to train technicians on EV and eve for all the customers its a lot \$\$ to buy and repair. I do not think the government should be deciding for me or for other New Mexicans!! I do not like that at all!! there are a lot of jobs in NM that need gas truck and diesel trucks to get around and to haul big loads and to get around the Oil fields turbines, electrical plants and so much more. And is really stupid for make EV vehicles it take diesel machines to make the EV vehicles! the Machines air is still going to have emissions from the making of the EV's! Without gas and diesel there would be no EV's!! So with that being said it is very stupid and pointless of what the governor is trying to do. I Gabriel Austin, strongly mean it and stand for what I said and support all the other New Mexicans that are on the same page as me. I DO NOT SUPPORT EV VEHICLES!!!
