

## Phillip Box

The last time I checked the state of New Mexico was listed as a free state with in the nation and the United States of American is also listed to be free choice nation. In simple we the people are the ones who get to choose and not the government(s) dictating. How are we free when you politicians and government agencies mandating (forcing) things such are electrical vehicles upon us. We folks that live in the rural area of the state are not able to comply as we do not have the ability to recharge them, have them maintained,serviced, and are very expensive, etc. in our local communities. We deal with traveling large distances each day. Let the free market work and when these areas of concerns are properly addressed at a fair price people will choose the best. WE ARE NOT RUSSIA, CHINA. We the people get to chose not the government.
