

## William Martinez

The infrastructure in NM will not support this. There are limited charging stations in the state. I live in a rural area and can't afford to buy an electric vehicle. An electric vehicle is not economically feasible for myself or my family. We live paycheck to paycheck as it is and then adding additional charges on our electric bill just does not work. I have electric heaters in my house and my winter electric bill goes up over \$200 a month and it creates struggles to pay bills. If the vehicles were cheaper and the electric cost would go down it may work in the future but I prefer to eat and keep a roof over my family's heads. Electric vehicles do not work for New Mexico!!
