

Darragh Nagle

I have been driving all electric vehicles here in Santa Fe New Mexico since 2016.

I have been emitting zero emissions, charging my vehicle on solar power at the Geneviva Chavez Center with solar panels, and at my home with solar panels.

I must say, I do not miss gas stations. The smell is terrible. I also feel good about not polluting our air with exhaust emissions and causing global warming.

My plan is to drive all electric all the time. I sold my last gasoline powered car in 2016, after I got my all electric vehicle. I plug it in, in my garage every night, and when I wake up in the morning it is full. My average bill for that is 82 cents.

I am helping our environment by doing this. I encourage all New Mexico residents to do the same.
