

Daniel Regan

We need to get serious and get prepared to transition as completely and quickly to fastest drop in the use of fossil fuels as we possibly can. The EVs are one step in that direction.....they will NOT solve all of the problems but they will help. I would also like to register the fact that the two pieces of City Council passed legislation (O-23-88, and R-23-176) need to be negated at the first possible opportunity. Albuquerque does NOT need to either return to the bad old days of polluting the heck out of the rail corridor, the South Valley or the Isleta Pueblo. Both of these bills will do just that@@@ Thanks Dan Regan
