

# Andrew Stone

12-year happy EV driver here!

We mostly charge at home during the sunshine hours for local driving, and have had no trouble driving to Denver or L.A over 10 times. Getting to the remote parts of the state used to cause some range anxiety but charging stations are proliferating around New Mexico as local communities step up to meet the future. For example, the Major Market in Zuni just added solar powered EV charging stations.

We are in a time where the appropriate question is not just "what is the government going to do about climate change" but "What can my family or business do about climate change?" The process of electrification of our small family farm has been a joyous ride, and I encourage you all to do what you can.

We support the Governor's Clean Cars & Truck plan to make EVs both more affordable and easy to charge anywhere in the state, and so should you!

Thank you for your service!
