Universal Waste Systems, Inc. / Broadway Transfer Station

I am in opposition of the Broadway Transfer Station (Universal Waste Systems, Inc.). It will pose a situation in which a collection and accumulation of solid waste will be processing 800 tons per day, with a maximum of 1,200 tons per day. The trash will be transported from four different counties to be exact and was recently decreased from a total of six counties that are outside of our district. The Mountain View community should not be subjected to being the main source of alleviating disposal of trash from several counties. It is unnecessary and unfair to the residential community.

It would be considered as a fire hazard, because of the proximity to the neighborhood and also, the Mountain View Elementary School. We do not have an emergency preparedness plan in the Mountain View Area. The ingress and egress easements are not efficient for such a plan and has been pending for many years and abandoned by Bernalillo County Emergency Management.

The truck traffic (Round Trip - 800 diesel trucks) would create serious traffic problems to an already congested traffic corridor. It would increase the air pollution and public health and wellness impacts to those living in the Mountain View Area.

Sincerely,

Nora Garcia: MVNA
