

## James Linnell

I believe the impact on the infrastructure of Broadway and the surrounding area by this project will degrade in a short time the transportation corridor of Broadway and the environmental stability of the residential areas nearest to the transfer station. The impact statement says the traffic will increase by 3%. I don't know what 3% is based on. I see numbers in the hundreds of trucks coming down Broadway and going back up Broadway to the landfill. The county hasn't paid much attention to the safety of this Broadway corridor, providing turn lanes where traffic is heavy with big trucks and cars stopped trying to turn. The increased traffic will just make this situation more dangerous. The heavy trucks that are described as coming to the transfer station will take a heavy toll on the road. I'm not optimistic about the county paying attention to keeping the road up to grade. The Mountain View elementary school is just west of this transfer station. Particulates this station will generate adds to the already load of industrial activity near the school. So a concentrated population of children is nearest your proposed facility. It adds to the burden of children playing outside in the air they breathe. this facility seems to be rolling the dice on the health and well-being of the residence in its vicinity. I don't believe it should go forward.
