

Danny Maldonado

I urge that this project be reconsidered the negative impacts from traffic alone should cause this to be a hard stop. Having over 400 trucks per day moving past an area that people have to commute to reach their homes is a blatant disregard for the safety of the residents of the Mountain View Community, and will eventually lead to the harm of its members via emission, congestion and eventually collision!! Not to mention Mountain View is already one of the most underserved communities in the Abq are and now we are literally giving them not only our trash, but the trash of the surrounding areas. If your looking to turn this into a commercial wasteland you may be on the right track. The fact that our ground water will also be accessed to to keep the dust from trash down, during one of the biggest drought periods is even be considered is borderline comical. Again putting trash ahead of agriculture and residents!
