

## Cathy Potts

Again the Mountain View Neighborhood residential area is being thrown under the bus by allowing more polluting waste be added to the atmosphere along with the noise pollution that comes with it. Last weekend was a prime example of the dangers these waste transfer areas bring to this community and point out just how many of these waste facilities exist in the area. So then the thought must be "Oh let's dump here because we already have detrimental businesses existing and we can just allow more." The dark plumes of billowing dirty air filling the sky and entering the lungs of children, elderly, and all point to a reason this enlargement should not be allowed to happen.

I say NO. Enough is enough. We love our community and don't wish to have more detrimental pollutants added to it. The addition of more large trash trucks on Broadway and Rio Bravo presents more traffic hazards to all of us in the South Valley. Let Universal Waste Systems add this 4 county trash transfer to their neighborhoods. Mountain View has received enough.

I sincerely trust the NMED will look at how this area has already been burdened with heavy pollutants and think of the welfare of the citizens who live here, not the favoritism some politician or corporation might grant them.
