

## Miguel Escamilla

Hello I am a life-long resident in the area residing adjacent on the other side of the river. I do believe that this proposed waste transfer station will benefit residents/others in the short-term but inevitably may bring farming, residential as well as commercial businesses to an eventual halt due to the added congestion on the roads that nearly 500 trucks will cause. We have some of the worst roads in the US ranking 4th for the highest amount of automobile accidents in the country. Ongoing construction, unstable roads, distracted/aggressive drivers, these are only some of the reasons I believe that despite the need for a waste transfer station I do not believe that our roads and drivers are anywhere near prepared for the traffic congestion that will come with it let alone having to share the lane and median with nearly 500 trucks my biggest fear and concern will be the added influx of accidents involving both pedestrian and mobile vehicles alike. Thank you have a great day.
