I am in support of this transfer facility. The amount of traffic and the number of trucks that are on the city streets will be reduced when this facility is in operation. Every waste truck now must take the 30 mile roundtrip to the landfill and then back to town to complete its route with the travel and the wait time of 15 to 45 minutes to dump that means the operator has spent 90 to 120 minutes for one load. If the transfer facility cuts that time in half the simple conclusion you accomplish more with less trucks less fuel burned less city traffic. Looking at the overall efficiency and cost savings this project has my support. Lets move forward the operator has experience and successful operations in california he can certainly be conscientious here as well
