

## Caroline Knapp

As a resident of La Cieneguilla whose private well has been deeply contaminated by PFAS due to firefighting foams released into the groundwater at the NM Air National Guard site, I urge the Environmental Improvement Board to adopt the PFAS Firefighting Foam Bill rulemaking. The harm our community has suffered will continue to afflict other New Mexico communities unless the EIB acts to protect us. This rule will protect not only our sacred water itself and the human communities that rely on it, but also our firefighters, who bravely put themselves in danger to protect others. Protect communities, protect water, and protect firefighters by approving this commonsense rule to regulate dangerous PFAS chemicals.
