# Todd Miller

The idea of a permit for the infrastructure completion to support part of project Jupiter requires a lot of knowledge and skill. I wrote PSD Major Source Permits for almost 30-yrs, in Texas, Oklahoma, Alabama, projects in Saudi Arabia which actually used TCEQ permit forms (numbers on page with TCEQ ID even. The level of detail on what's going to happen, what is required, and monitoring requirements. The folks of Las Cruces and other locals are complaining a lot about items on the Project, simply out of ignorance. The lack of understanding and details leads to complaints out of fear and bad information. This is a small part of the overall project, similar to the needs of the natural gas system for generation of electricity to operate the data center. Listen to the complaints and let EPA Reg-6 be involved. Keep it going!!
