

Taylor Conlin

I am writing against the proposed air quality permit request.

As a resident of New Mexico, I don't believe New Mexico should host Data Centers. It is a strain on already tight resources, water and energy. Yucca, Oracle, Open AI and Project Jupiter have shown they do NOT have New Mexican's best interests in mind. And they will continue to manipulate and pay to exploit our land and resources to line their pockets. The promises made are not enough to justify the harm that will be caused. They have also not worked in good faith. Paying people to harass and lie to residents and submit fraudulent comments.

I don't trust Project Jupiter and I think most residents also feel the same.

Data Centers need more regulation. They need to be held accountable, they need to pay for the energy and resources. That cost should not be passed on to residents since we do not see any benefit. New Mexicans are being exploited to continue to line the pockets of billionaires and oligarchs. All while the planet gets hotter and the Rio Grande runs dry.

Project Jupiter will emit more Greenhouse gas than Albuquerque, Las Cruces, and Santa Fe combined. They have failed to meet deadlines to submit proper jobs reports. If the reports were favorable I don't think they would have missed those deadlines. I believe they missed them because they failed to meet the proposed jobs they alleged they would provide to New Mexican's.

Along with everything above, data centers cause obscene noise pollution that would negatively affect people and wildlife. Would leech harmful forever chemicals into the soil and water systems It would raise day time and night time temperatures in the area. They would emit CO2 and Nitrogen Oxide increasing risk of asthma, cancer, and heart attacks to anyone in the area.

It would bring higher energy costs to local residents already facing possible increases should PNM be acquired by Blackstone (Open AI and Blackstone have a 10 billion dollar deal that should be considered a conflict of interest!). At a minimum Project Jupiter should pay for the entire cost energy and infrastructure required to support it.

TLDR Data Centers are a bad deal for New Mexicans and all data center construction should be halted and reevaluated to benefit the community and the land that they occupy, not the shareholders and companies only seeking to profit on the exploitation of the people of New Mexico
