David Buurma

I am very much against the Project Jupiter data center in Dona Ana County, NM.
The energy generated, the water depleted, and heat generated by the data center might do more harm than good for the people of Dona Ana County. The water depletion is especially worrisome in our state. The air pollution from nearby Juarez and the air pollution generated by the data center is concerning.

Please listen to the people of New Mexico and not the corporations heading up this project.

Thank you David Buurma
