

Isabel Dalton

I am vehemently against the development of Project Jupiter in any capacity. Project Jupiter has already damaged the lives of New Mexicans and eroded trust in the government because there have been reports of falsified comments in support of the project. Additionally, Project Jupiter was started by an LLC that stole the name of Acoma pueblo, even though they have changed their name they have hurt our federally recognized pueblos. They clearly are not going to benefit this state and are already making a habit of harming it. Finally, the environmental consequences of this project will be detrimental to lives of New Mexicans as the air quality will be reduced, which is a wildly reported phenomenon across the country at other data centers. There are many other concerns I have for the impact of the data center including but not limited to noise pollution and water usage. I beg that you do not give them the permit to protect the lives of all of us New Mexicans who call this place home.
