

Raya Cabriga

I care very deeply for the present and future of generations. After all, I am part of a generation in which we are the first to experience the negative effects of the air quality declining and the last generation to do something about it. I greatly oppose the creation of the two methane gas-fired power plants. Their construction would release toxic chemical pollutants and 10 million tons of carbon dioxide into our air, causing a great amount of air pollution. The air pollution will take years to recover, thus doing more damage than actual good towards the environment and towards the people who are affected by this.

The pollutants can cause permanent damage to the human body, such as heart attacks, damage to the liver, cancer, and strokes. Additionally, Project Jupiter can harm our air supply. I plead and hope for this project to stop. Many will suffer, many will die, and many will experience trauma. The people's health and safety should be worth more than the profits.
