

Daniel Parraz

I oppose the allowance of a gas pipeline for gas turbines that are being proposed to power this data center, as New Mexicans have had our air and water polluted by companies that end up filing bankruptcy and never having to fix the problems they created. Is Oracle/OpenAI going to pay for the increased asthma and lung cancer cases that will arise from these pollutants? If we look back at history, ASARCO did the same thing with their copper smelter and caused health issues for a generation of people living in the El Paso/Cuidad Juarez metro. If the builders of this project had any foresight, they would have had a solar farm built for this project before the data center. As we all should know by now, this data center is being rushed before the AI bubble pops, and they are going to also cut corners on cooling, and other promises they have made to the people, in order to get the project online and off their financial books, and on the backs of New Mexicans. The truth is that this data center build is full of lies and they are expecting New Mexicans to roll over and allow this data center to continue for a few jobs once completed, but it's not worth the loss of water, the increased cost of electricity (we know it will increase), or the negative health affects.
