

Jessica Rodriguez

Our state is a desert and in recent years we've been in a drought. Not only that we've been growing in popularity gaining more residents. Our rivers are dry and this year 2026 we've had at least 3 fires in my area. It's dry and they can't be contained right away. Project Jupiter would only deplete the little water sources we have, cause our air to be polluted and only make our state hotter. No to project Jupiter !
