

Tyler Montgomery

Data center in New Mexico undermines the significance of the land to indigenous tribes, undermines the people living in NM by taking water we don't have, using more energy than we have, polluting the air, raising the temperature of the desert air, and noise, and won't even create Jobs all to power something we don't need and didn't ask for. We don't need A.I. we need clean drinking water, clean air and opportunities and those will be taken away with this data center. As a Native New Mexican I'm against this Data center being made here and would also request that: 1 An additional 60 days be given to the community to be able to review and comment. 2 The air quality permit should be denied, given Bloom Energy's history of Illegal dumping of hazardous waste. 3 That a public hearing be held in Santa Teresa in English and Spanish with the option to participate virtually, if the air quality permit is not denied.
