

Ana Brouwer

I am strongly against the air permit for Yucca Growth and any other permits that will allow this data center to operate. The last thing we need in our drought-stricken state and community is a data center to recklessly use water, our most precious resource. As a mother of two young children, I am deeply concerned with the negative impact this data center will have on our water supply, use of power, and how it will impact our environment in the very near future, endangering the quality of life of my children and our entire community. The economic benefits of the project will be temporary and the harm done far outweighs any such benefits. This project is wildly unpopular and unwise. Listen to your constituents and put a stop to it!
