

Caroline Toth

I am writing to ask you to please halt all further development of the microgrid and all associated structures related to the planned data center as part of Project Jupiter (hereafter PJ). PJ has shown us that they are only interested in listening to the public on their own terms. PJ has cancelled public hearings, bought county commissioner's votes, and failed to produce environmental planning documentation on the timelines required for all other projects. New Mexicans know that PJ is only interested in the public's opinion as a marketing tactic; they have dodged all accountability, and as a result, we know that they are not acting in good faith. I, and many other New Mexicans, fear the environmental consequences of such an energy-intensive project on extremely vulnerable land. It is bewildering to see widespread public opposition ignored on so many fronts. Please help us protect our land.
