

Coda Weaver

I do NOT support this project or any facet of it. Firstly, Project Jupiter has been paying for campaigners in the local area to help promote the project, but the workers provide information of those who also disagree with this initiative and claim that they are in support, which tells us a fair amount about their lack of transparency or integrity to begin with. Next, I believe this project would be a clear demonstration of environmental racism. New Mexico is a very poor state, with a large minority population. We ALREADY struggle with air pollution and drought. There is no need for a data center, no want for the data center, and clear evidence that it would exacerbate existing challenges that our community members already face. We can learn from other locations with data centers the clear impact of their existence in that space. There is no evidence nor reliable promise that this data center would be different, despite the unfounded claims by campaigners. New Mexicans in my community and myself are saying NO to this build.
