

tamera harper

I don't think Project Jupiter should happen. We're already dealing with climate change and considering AI and ChatGPT uses hundreds and hundreds of water while the Rio Grande is drying up it's just going to make it worse. We need more birds, animals reptiles flowers trees everything to succeed New Mexico is already very dry and the fact that this wants to happen is ruining New Mexico and the world. Matter of fact, I do not agree with this and I want it to be done.
