We have no planet B. for so so so many years we have survived without generative AI, thriving off what the earth has to bring us, the NECESSITIES that we CANNOT survive without. Not only by building these data centers are we releasing unbelievable amounts of cO2 into the air that WE breathe everyday and taking up water, something that we LITERALLY can't survive without, but we're promoting the use of AI that is ACTIVELY causing cognitive decline in children and adults and colonizing on the little land left that we haven't already destroyed. For the future generations, for every animal that continues to walk this earth, for every single human that breathes this air, drinks this water, and eats this food, this HAS to stop, and FAST. We are running out of opportunities to stop climate change before climate change stops us. No matter how RICH you are, how PRIVILEGED you are, how OLD you are, or how much you think that this doesn't affect you, climate change WILL catch up to you, and it will catch up to you when it is too late to reverse it. Remember please that everyone has DREAMS, HEARTS, AMBITIONS, PASSIONS, and COMMUNITIES, and none of that should be denied of them because someone thought generative AI was more important. If you think that sounds stupid, remember that generative AI will mean NOTHING if there are no breathing humans left to use it. Thank you.
