

K Hoffman

I ask that you approve the air permits as requested by YUCA Growth Infrastructure. As I understand it the air permit requested provides output that is below the maximum level established by the state. If that is so than it should be approved. Politics or other outside interests being involved with this permit process do not belong in the decision-making process. If the rules are changed through the appropriate process and that would leave the project above those standards I would agree but that is not the case here. Please move forward with approval and don't let the other things get in the way.
