

Douglas Ahlgrim

Dear industry partners. We truly appreciate all that OSHA does for the Trades in NM and nationally. Unfortunately this proposed item would shut down production in the SW and hurt an already very busy industry. We require and monitor heat exhaustion in our work environments throughout the summer months and have found thru proper hydration, awareness, and alternating exposure times controlled approaches work. This ruling limiting time of exposure to temperatures would not improve a working system, but hinder our ability to produce. We truly appreciate your time to review this response and ask that this ruling be removed from consideration.

Thank you,

Douglas Ahlgrim
