

Camellia Termini

School working conditions such as students learning in classrooms close to 85 degrees are dangerous and put students at risk. Students become fatigued, have difficulty concentrating, and in turn, start acting out. It is extremely difficult for students to learn in these conditions and we put those with special needs at risk of heat exhaustion. Do you want your children in a classroom of nearly 30 students where the temperature is almost 90 degrees? How can anyone learn or perform to their capacity indoors?
