

Barry Phillips

Please record this as a strong opposition to this over-burdening proposal for the workforce that deals with this situation. There are a plethora of guidelines and regulations already in place, coupled with a thing called "common sense" to navigate our everyday actions regarding heat/cold related scenarios. Can someone point me to the independent, peer reviewed study where 80deg F is considered to be of consequence? How about drinking when you are thirsty- too much water could lead to hyponatremia which is much more dangerous, 4 cups an hour seems way too much! And so on.....
