Do not approve 11.5.7 NMAC. OSHA has rules protecting workers. It is updating those rules. NM should wait until it does. Having workers rest 45 minutes after working 15 minutes is ridiculous. How is any job outside supposed to get done? Road construction would be delayed not just by days but weeks/months. Is the company supposed to pay for 8 hours of work for a possible 2 hours of work? Will airconditioned trailers have to be provided because shade can also meet the temperature markers? Any outdoor will work will be costly to business owners and tax payers. If you asked the affected workers they probably don't want to sit around for 45 minutes for 15 minutes of work. The equipment isn't built to sit around idle and started back up. (road tar machines, cement mixers) Just try pouring a large cement job for 15 minutes and then coming back to smooth it or pour more concrete. This is a really bad proposal made by someone with a desk/computer job.
