

Dear Members of the Environmental Improvement Board,

I respectfully support the air quality permit applications for Project Jupiter.

This investment has the potential to create opportunities that extend far beyond the project site. From skilled trades and construction to local restaurants, retailers, suppliers, and service providers, the economic impact of a project like this reaches across an entire region. I believe Southern New Mexico is well positioned for this opportunity, and I respectfully encourage the Board to approve the requested permits.

Thank you for your service to the people of New Mexico.
