

Tanya Valle

Planet Jupiter will disrupt the ecosystem, to us humans, as well as animals. Planet Jupiter is something the community does not want! This will interfere with the people's water, animals ecosystems, as well as habitats. This will effect everyone, we do not want this built, we do not agree to Planet Jupiter, we do not want this built, we do not want this to happen. Speaking as a citizen, I do not want this built. We do not need AI, nor is anybody asking for it. We've lives without AI and we can continue to live without it, there's no benefit. Project Jupiter will spend water, the water we already cannot spare more water loss, our water is crucial especially with these new data centers popping up, we cannot afford a water crisis. If politicians keep on building ai data centers, our water will turn sacred, not because of the community, but because an AI data center that we did not want, nor asked to build. Our water in some places that data centers have already been built, their water has been turned sacred, their water is dirty, tap water is turning brown, tap water is undrinkable, rivers are drying out, lakes are drying out, because of these data centers being built in our cities, in our states, that the community did not ask for. This will affect our communities, our children, our future, we're not asking for data centers, we're not asking for more of them, in different areas, we're not. This is a climate disaster and will affect climate change. We're already at a crisis where the Atlantic is facing ice loss, as well as polar bear loss. Our polar bears are almost extinct because of climate change, because our actions are affecting it, we don't need another data center, nor we need the largest. We need a change, a change where it'll benefit the environment. We do not need a ai data center, that will only destroy and destruct our water system, make our climate change worse, our green house gases worse, and will impact everyone including animals significantly, no to it
