

Emmanuelle coulombe

In three years, global warming will become irreversible; we have only three years left to change this, and this year marks our last "coolest" summer. Our environment cannot afford to keep deteriorating. The Jupiter project represents a waste of natural resources primarily water and harms the ecosystem; it is not essential for humanity's development. Approving this project would constitute government-sanctioned environmental racism, as the residents of Doña Ana County are already disproportionately affected by environmental pollution. Those funds could instead support initiatives that help our ecosystem and protect vulnerable people. All that money could help feed families, so why use it to destroy our planet? We cannot afford more intense heat. The other toxic air pollutants are extremely dangerous—many of them at very low levels.
