

Susana Estorga

My family and I do not want data centers in Doña Ana county or anywhere in the state of New Mexico. We are already a desert/drought state. The people need the water before data centers. With our state already running out of water, getting less and less rain every year, and the Rio grande drying up, a data center is the last thing New Mexicans need (or even the USA for that matter). Data centers putting propaganda out there to convince the public otherwise is an insult to our intelligence and complete corporate greed to take advantage of New Mexicans basic needs. I am making a point to reach out to everyone I know in NM to ask them to take action against data centers. Project Jupiter needs to be stopped in its tracks and banned from continuing in Doña Ana county and the state of New Mexico. People over data centers! Stop stealing our water! New Mexicans against data centers!
