

Lucas Smith

Construction of the data center and its corresponding power plants is a ludicrous use of New Mexico land and resources. The water load of the Project Jupiter campus is outlandish and made especially absurd by its desert location. AI data centers in other areas of the United States have proven harmful to nearby residents in a variety of ways including poor water quality and pressure, increased temperatures, and high noise levels. Approval of the construction of these power plants and the AI data center they come with would be an ultimate betrayal of the New Mexican people for the benefit of out of state billionaires.
