

Elizabeth Cruz Lopez

I would like to formally ask to stop the construction of this data center that is not only not necessary but also could endanger fresh water resources while also destroying the environment. Other than the clear changes that this Open AI center brings to the environment, it is also important to consider the negative changes AI has to the community, an example being how dramatically the educational system has changed. As more students have access to AI technology, they began to rely on not only what the AI responds (which at times is not correct) but also lower critical thinking skills as they are dependent on it. Think of these changes and STOP Project Jupiter.
