

George Jacobs

Project Jupiter has thus far been initiated without using the proper approval channels allowing public input. This letter is in opposition to granting the Air Quality permit. The project sponsors have a long record of environmental damage and operating while not adhering to applicable codes. Nothing in their history supports otherwise. Air quality is at risk in any data center project...this particular one, applied for by an applicant with a dismal track record on adhering to air quality codes, must be denied. S. NM is already in a dire situation environmentally. The concept of adding more emissions to our air, at the scale of what this project would bring, is absolutely contradictory to the intent and purposes of an Air Quality Code and other supporting codes.
