I am writing this to express my concern and to say that Project Jupiter is a horrible idea. It not only will harm the environment even more and the inhabitants in the surrounding area, it will also use gallons upon gallons of water daily. The community in New Mexico relies on this water to maintain their farms. Without this water families who are already struggling will suffer. The earth is already using millions of gallons of water daily just for other AI data centre around the world, why do we need another one? Humans have lived for centuries without AI and now all of a sudden, we can't live without it. Students are lacking knowledge, they don't know how to study or write an essay all because there's a tool that simply does it for you. While AI can be useful and sounds like an amazing creation, in reality it is a climate killing machine that takes away from our youth. So I ask you why do we depend on AI so much? In only 3 years climate change will be irreversible, but in 2020 during lockdown, the environment started to bounce back and heal itself, so what's stopping us from helping it bounce back again, stronger than ever.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
