Greetings! In full disclosure, i am not a US citizen, I am writing because I am concerned about the risks and harms Project Jupiter poses to New Mexicans the all of us. The use of AI, and furthermore the creation and establishment of data centers its not only a danger to the local population and ecosystem but also threatens the world by large. I have witnessed my friends, family and strangers fall pray to the dangers of AI, each use leaving them more reliant on a technology that preys upon them and their data, leaving them vulnerable to its dangers. But to me the greatest and most important thing about the use of AI is the cost it has on our planet. Data centers rely heavily on the use of water and have been known to release toxic chemicals to the environment, causing many health issues and generally negatively impacting nature. I ask that you take a stance, however taxing and limiting it may be. To stand silently on the face oh harm is to support it however it may be. As large as this project plans to be, and for all the money it can profit the companies behind and those who side with it, the cost will always be higher, especially for those who are vulnerable to it. Right now we don't need new data centers or even AI in its most common use, we need action, hope and the ever standing stance against what is wrong. I urge the NMED to outright reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid. I ask the department to please hold a bilingual public hearing near the Santa Teresa community, so that residents can learn about the risks associated with fuel cell technology. Humans need to believe in the future again, long for its creation and arrival. I am 20 years old. I should not have to fear living in the world, wary of the current politics and unwilling to accept that my only life will have to be this way. Project Jupiter has the capacity to be the death of us all, and i will not face it silently. Will you?
