

Chloe Poncho

Protecting and caring for our state while no one is speaking up. Caring for the future of our lives were taking action into caring for our future and our HEALTH. Building this project would not only harm us but our environment not making it safe with the new fumes and chemicals being released into our atmosphere. Take a look into the health section, health risks would be risen as our airs would soon be polluted. Hospitals are going to do as much little as they can to help people getting sick with all the new pollutants soon going to be in our air, causing health risks. New Mexico is called Land of Enchantment because it's so full of life and natural beauty, with this new project we're going to start seeing changes within our environment.
