

Isabella Mintz

I write to you and your concern as many thousands are also doing because we are pleading for you to not approve this data center. The change of technology doesn't change the negative outcome on the environment and overall living conditions of the human beings who have to inhabit that area our whole planet even AI has been proven time and time again to be destroying our planet, actively at a very rapid rate more rapid than we can do anything about unless we actually start trying and even then it's not guaranteed, but at least it's better than building a world where people won't have clean water or suitable living environments we need to make change and we need to do better the approval of this major AI data center will have incredible consequences and possibly undoable completely. We urge you to look at the facts and listen not the money behind it the facts are this is killing our world as we know it rapidly not just our world but us imagine your grandkids your kids growing up in the world where they can't even have drinkable water where they're boiling outside because the temperatures are constantly rising. The rain cycle cannot replace the amount of water. It takes to cool down a data center let alone one at this massive destructive size your positions are to be for the people and what is best and if you approve this AI data center that is actively going against your position. Therefore, you don't deserve it with no disrespect meant however it is true. Don't let those millionaires take what is already been taken so many times from New Mexico constantly used and drained for its resources but never actually given help. This is the time where you can put your foot down and say no more and make a difference and do better for the people who lived there and overall for our country please read this and the other thousands with deep consideration and compassion corporate world doesn't mean that you're not human
