This permit is no safer for our communities than the prior. Changing technologies does not change the undeniable and catastrophic risks to our local communities, water supply, and air quality. This would cause green house gas emissions to be larger than or 3 largest NM cities combined. There is no sustainable version of Project Jupiter or extraction for New Mexico, regardless of how developers power it. There is no room for data centers in a healthy and thriving New Mexico. Additionally, Bloom Energy should be denied the air quality permit application given their history of illegally dumping hazardous waste and materials.
