

# Mikayla Brewer

Hi, my name is Mikayla and I'm a resident of Santa Fe, NM. I'm 28 years old and for the entirety of my life, New Mexico has been in a drought. The limited water we receive from the Rio Grande should go to nourishing our communities, not cooling a data center for the sake of AI.

For generations, New Mexico has been treated as expendable, a place where nuclear weapons have been created and tested, poisoning our families. We cannot allow another corporation to ravage our land; we must reject the data center.

Thank you for your consideration.

Sincerely,  
Mikayla Brewer
