

Aiden Littleton

I vote to reject this permit application it makes no sense to have a AI data center in New Mexico to take up the limited water resources that we already have. I have seen the water that the communities around these data centers are left with and it is unpottable water. The people here do not need this be the difference in government, we are already dealing with so much as it is don't ruin our water on top of that. Be on the right side of history!
