

Kate Romanik

The proposed development is not good for New Mexico. We need running rivers and clean water for drinking and farming, not data centers. The review period must be extended at minimum another 60 days in order for community members to have proper time to read and understand the proposed data center and its effects on the community. The proposed development would contribute to environmental racism, by placing this data center in a majority poor, brown community. The possibility of new jobs will not make up for the horrible and potentially irreversible damage to the environment and drinking water.
